DETAILED ACTION

Claim Rejections - 35 USC § 102/103

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 15-26 are rejected under 35 U.S.C. 102(b) as being anticipated by, or in the alternative, unpatentable under 35 U.S.C. 103(a) as being unpatentable over Coran et al. (US Patent 4173556).

Coran teaches elastoplastic compositions which are blends of cross-linked rubber and thermoplastic polyamide (Abstract). Compositions are comprised of 20-50 parts of polyamide and 80 to 50 parts by weight of rubber (Column 2, lines 39-42). Carbon black can be blended in from 20 to 100 parts per weight of carbon black and rubber (Column 10, lines 14-16). Examples of polyamides used include nylon-6, nylon 12, nylon 6,6, nylon 6,9 and nylon 6,10 (Column 7, lines 13-19). Rubbers disclosed include "rubbery polymer selected from the group consisting of a homopolymer of 1,3-butadiene, or copolymer of 1,3-butadiene or isoprene copolymerized with vinylarene monomer or vinyl nitrile monomer such as styrene, vinyl pyridine, acrylonitrile or

methacrylonitrile" (Column 6, lines 14-20). The patentee also discloses that the carbon black is masterbatched with the rubber and the masterbatch is mixed with the polyamide (Column 9, lines 57-62).

In the alternative that Coran is insufficient to anticipate the limitations of the instant claims, it would have been obvious to one of ordinary skill in the art at the time the invention was made to produce the compositions and masterbatches of the instant claims since Coran teaches each and every limitation of the instant claims.
